High Dynamic Range and LED Flicker Reduction for Display-Based Automotive Vision Systems

available in
a lead-free
package

OmniVision's OX02A10 is a high-performance image sensor that is designed for the next-generation display-based camera monitoring systems for automotive applications. Built on OmniVision's 4.2-micron OmniBSI™ split-pixel technology for exceptional high dynamic range (HDR), the OX02A10 offers best-in-class low-light performance and represents the automotive industry's leading LED flicker-reduction solution.

The OX02A10 achieves 110 dB HDR while guaranteeing LED pulse capture. This allows the automotive cameras to simultaneously capture bright and dark scenes, providing excellent performance in the most demanding

lighting conditions. The OX02A10 supports 1820 x 940 resolution in a 1:2 aspect ratio at 60 frames per second (fps), making it ideally suited for wider aspect ratio e-Mirror applications.

Additionally, the sensor's on-chip combination algorithm reduces the output data rate for easier data transition and back-end processing. The OX02A10 comes in a 9.5 x 6.8 mm AEC Q-100 Grade 2 qualified automotive chip-scale package (a-CSP™).
