

# OCOSA10 800 x 800 product brief

## Compact Medical Camera Module with Industry's Fastest Frame Rate at the Highest 640k Resolution

available in  
a lead-free  
package

OmniVision's OCOSA10 is the latest member of its growing family of reflowable CameraCubeChip™ wafer-level camera modules for medical applications. This module offers an industry leading resolution of 800 x 800 with the highest frame rate of 60 fps, or 400 x 400 resolution at 90 fps, for blur-free images and video. Additionally, the OCOSA10 provides a compact size of 2.6 x 1.6 mm and excellent raw color imaging performance because it integrates an infrared (IR) cut filter, eliminating the chromatic effects from IR light that cause color fidelity loss. This precise color reproduction is crucial for accurately identifying abnormalities within the body.

The powerful OmniVision PureCel®Plus-S stacked pixel technology imbues the OCOSA10 with high sensitivity, high full-well capacity, zero blooming, low noise, stabilized black level and low power consumption. Benefits of this pixel architecture also include a buried

color filter array for better angular response, a higher chief ray angle and deep trench isolation for reduced crosstalk. These features provide improved image quality over competing architectures.

OCOSA10 offers both 120 deg and 90 deg field of view options, in order to provide doctors, veterinarians and industrial applications with the best possible endoscopic images. To enable use within the body, the OCOSA10 is the only camera module in its class that offers ETO and STERRAD sterilization capabilities, along with waterproofing and biocompatibility. Additionally, it has low power consumption of 82.2 mW to reduce heat at the distal tip of the endoscope for enhanced patient comfort.
